

# BLOCKCHAIN

.....  
*Introduction for financial institutions*

# DOUBLE ENTRY ACCOUNTING

.....  
*The oldest record of a complete double-entry system is the Messari (Italian: Treasurer's) accounts of the Republic of Genoa in 1340.*

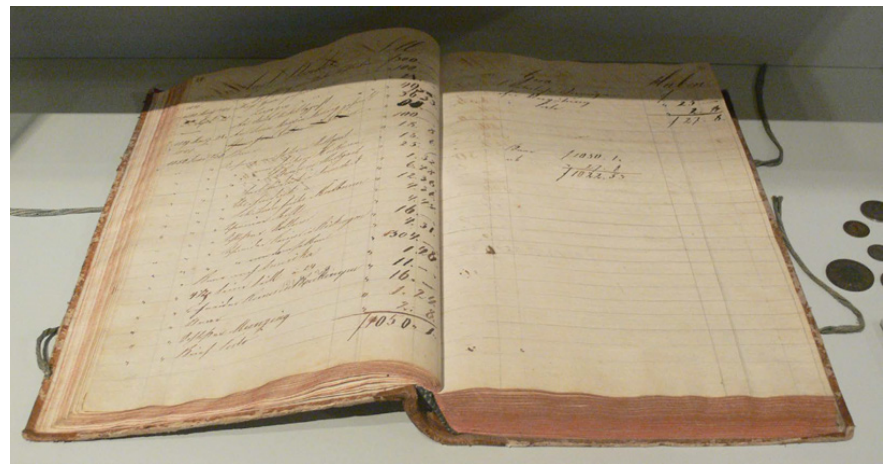

DR A/C A 100 — CR A/C B100

Party A

Transaction is recorder  
in both books

DR A/C B 100 — CR A/C A100

Party B

# INTERNET OF MONEY

---

*We can store and create money in Internet*

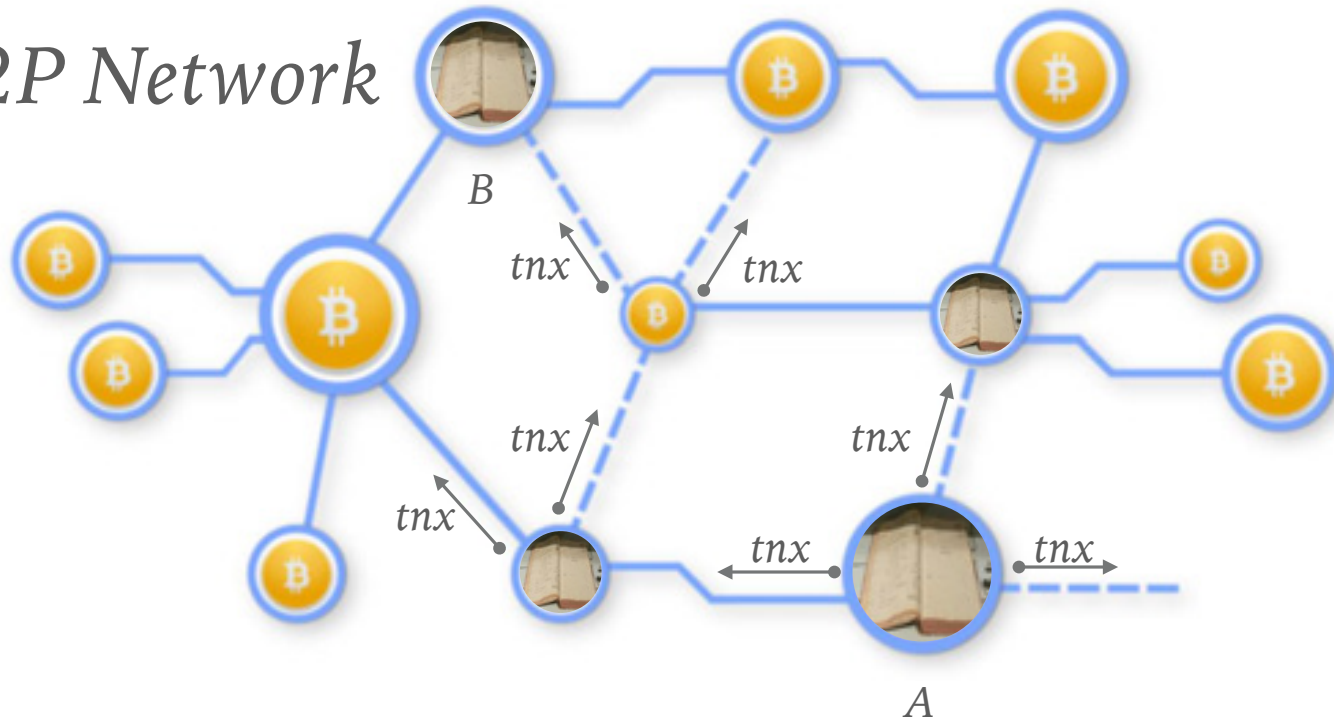

# BITCOIN

---

*In January 2009, the bitcoin network came into existence after Satoshi Nakamoto mined the first ever block on the chain, known as the genesis block, for a reward of 50 bitcoins.*

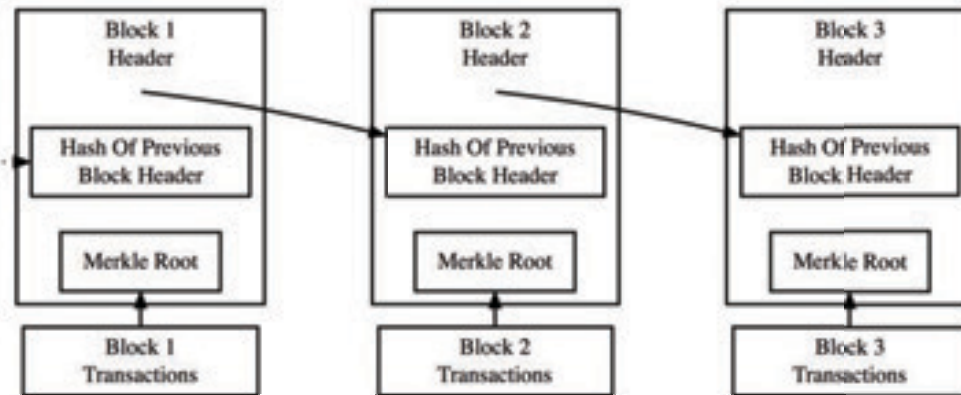

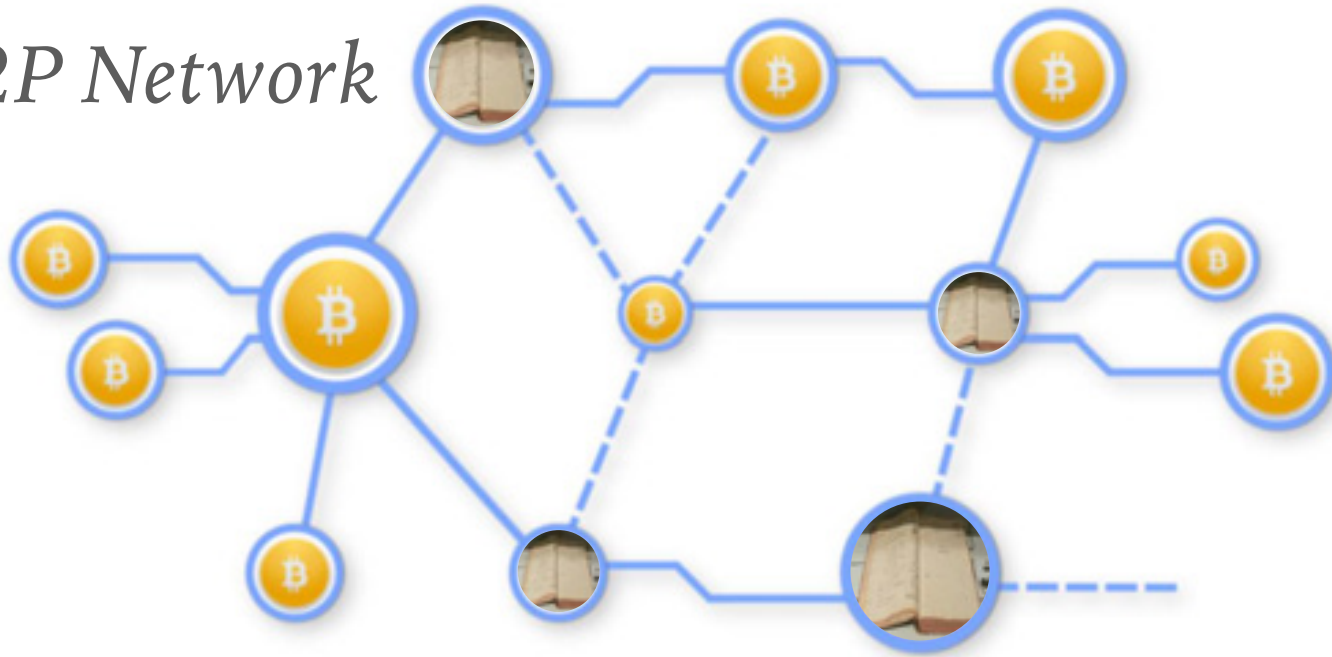

# *P2P Network*

*Transaction : A send B 1 BTC*

*Transaction propagation : ~15 sec 90%*

# P2P Network

Simplified Bitcoin Block Chain

# PROOF OF WORK

.....  
*To prove you did some extra work to create a block, you must create a hash of the block header which does not exceed a certain value.*

# BITCOIN ENERGY CONSUMPTION

---

2,547,377 householders (2008)

Danmark

Many central banks currently investigating

- 
- Bank of England
  - MAS
  - Riksbank
  - ...

Individual countries likely to pioneer

- South-east Asia
- Sub-Saharan Africa

Bloc CBDCs will emerge Tokenisation of assets

Disruption of capital markets

# INTERNET OF FIN. PRODUCTS

.....  
*Now we can create new products without financial institutions*

# ETHEREUM

*Ethereum is a decentralized platform that runs smart contracts*

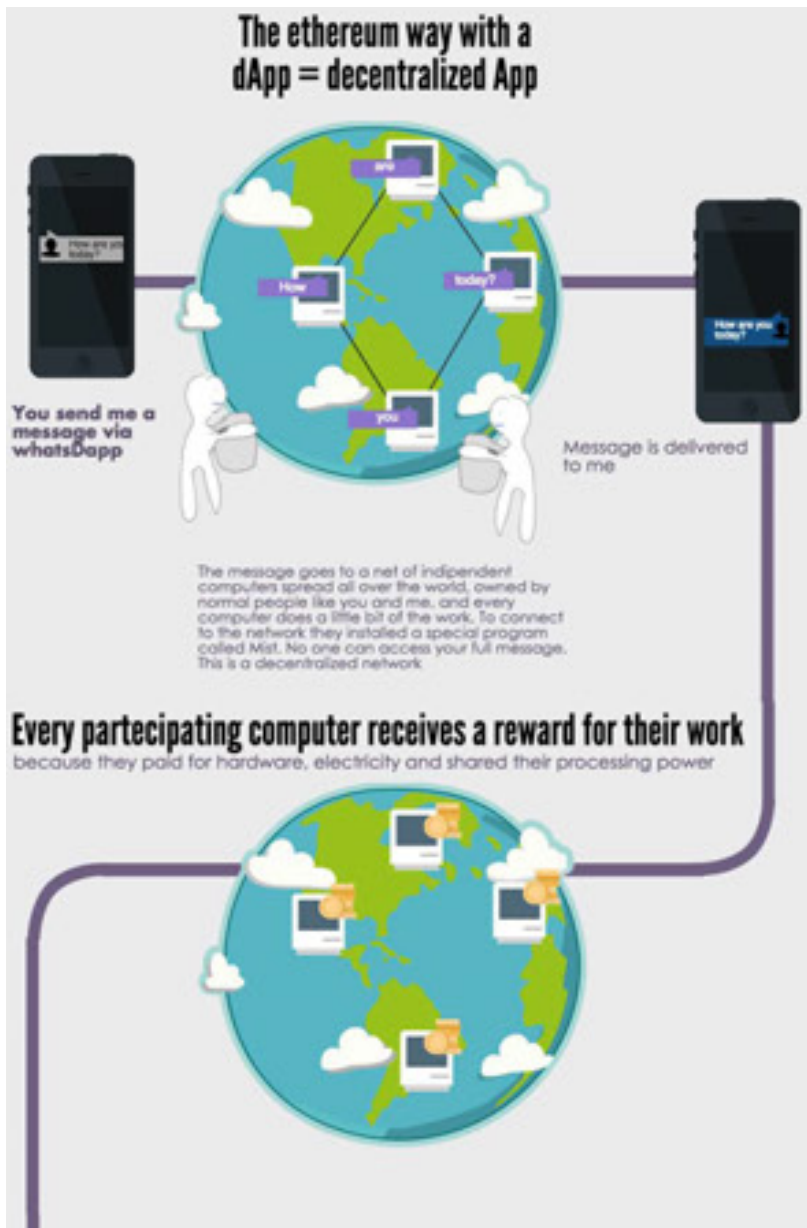

# SMART CONTRACTS

---

*Smart contract is NOT legal documents*

*It's program (code + data) stored in blockchain that can control money (cryptocurrency) in smart contract own account. Only smart contract can send money to a beneficiary (person or other smart contract)*

## VIRTUAL MACHINE

.....

This massive parallelisation of computing across the entire Ethereum network is not done to make computation more efficient. In fact, this process makes computation on Ethereum far **slower and more expensive** than on a traditional “computer”. Rather, every Ethereum node runs the EVM in order to maintain consensus across the blockchain. Decentralized consensus gives Ethereum extreme levels of fault tolerance, ensures zero downtime, and makes data stored on the blockchain forever unchangeable and censorship-resistant.

# ICO

---

*Initial coin offering*

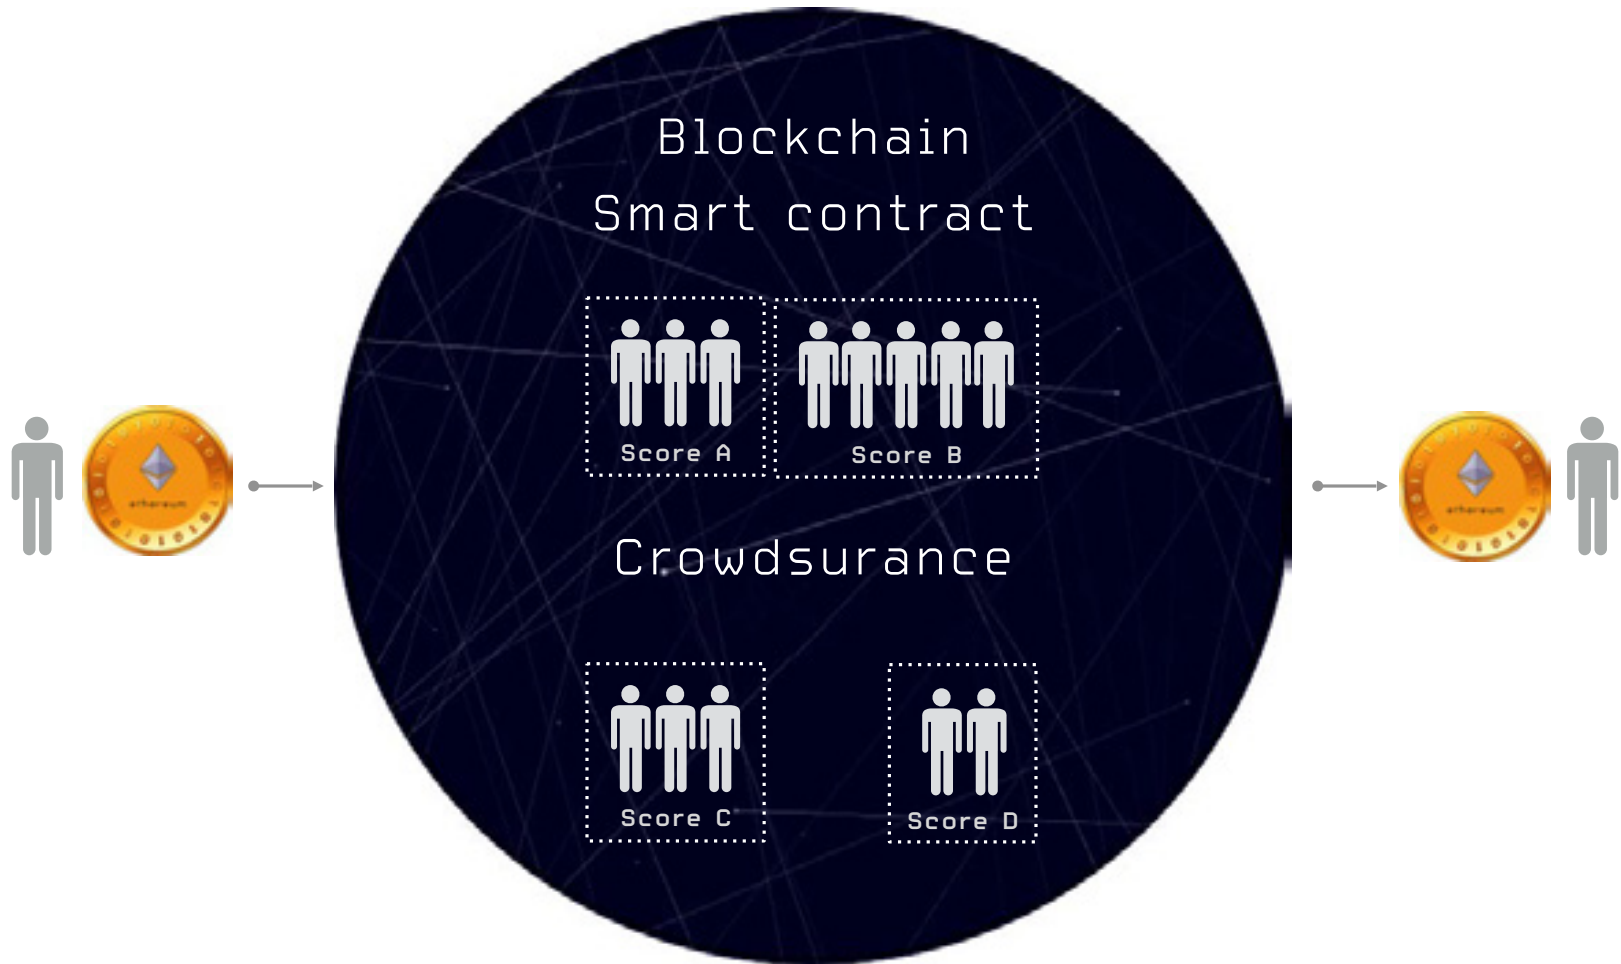

## ICO fundraising has surpassed Angel & Seed stage Internet VC funding

# CROWDSURANCE

---

## CROWDSURANCE

---

Compared to traditional insurance, in crowdsurance there are

- ▶ no insurers
- ▶ no brokers

all processes being controlled and managed by algorithms with full transparency provided by blockchain.
